

STORMWATER BASICS

The Facts:

Where Does It Go?

🌍 Rain water flows from the street into storm ditches and drains directly into the nearest stream, river or bay.

The Problem.

🌍 Illegal dumping is wrong. Stormwater mixes with oil, grease, fertilizers, pesticides, pet waste, debris and litter which can pollute our area water.

The Solution.

🌍 Do not wash contaminants, debris or litter into your storm drain or ditch. It is against state law to install unpermitted discharges into Nueces County storm ditches. Together, we can keep our water clean!
